

NIMBUS SHARE REGISTER – Nimbus AR®

Limited companies with registered shares are obliged to maintain a share register. Only registered shareholders may exercise their voting rights at the General Meeting.

Nimbus AR® is a comprehensive standard application for the professional management of share registers. With Nimbus DX, the electronic interface for data exchange between share registers and SIX SIS AG, data is automatically processed in the share register.

Nimbus operates the solutions suite from its own data centre, provides the necessary hardware and software resources, guarantees secure access to authorised persons and is responsible for data backup.

The issuer can choose to maintain the share register itself using Nimbus's Application Service or take advantage of the Business Process Outsourcing service and let Nimbus take care of the management of its share register. With Nimbus AR®, precise and legally compliant share register becomes a matter of course.

IN FULL CONTROL OF YOUR SHARE REGISTER

Management of master data

- Create and edit addresses, shareholders, banks, deposit data, delivery addresses, securities etc.
- Create and edit users

Changes of ownership with SIX SIS
